Wyat Soule

wyat.me · github.com/wsoule
linkedin.com/in/wyat-soule

Full-stack product engineer and two-time co-founder. I take products from 0 to 1 across backend, frontend and infra, then sell, support and iterate on them with the people using them.

Experience

Waggoner Financial — Lansing, MI
Software Engineer — *Jun 2024 – Present*

- Lead a team of 4 engineers (grew it from 1 by interviewing and hiring) shipping fintech products in a TypeScript monorepo I designed (NestJS, GraphQL, Next.js, PostgreSQL, Redis); bootstrapped 5+ greenfield products in it.
- Replaced legacy Excel workflows with REST/GraphQL APIs and ETL scripts, giving staff back 100+ hours a month.
- Halved page load times with query indexing, Redis caching and React code-splitting.
- Maintain 2,500+ Jest tests at 95% coverage, cutting production bugs by 70%.
- Provisioned cloud infra on Railway and built GitHub Actions pipelines (lint → test → build → Docker publish → zero-downtime deploy); new environments went from days to hours to stand up.
- Demo to clients every two weeks and write the architecture specs and roadmaps; spoke at university tech clubs and on an engineering podcast.

Hydrogen
Co-founder & Co-CEO — *Jan 2025 – Aug 2026*

- Co-founded a SaaS platform for automated pull-request review and built its Go backend.
- Owned product, sales, fundraising and hiring the founding team.

Brass Raven — Reed City, MI
Co-founder — *Oct 2022 – Jan 2025*

- Built Audioparrot, an audiobook production platform: Python microservices, Next.js frontend, multi-provider TTS (OpenAI, ElevenLabs, Google, Piper) and M4B export with chapter markers.
- Made generation 5× faster by moving chapter processing onto RabbitMQ async workers with Redis caching.
- Pitched 20 prospects through direct sales and conferences, and landed a technology partnership.

State of Michigan – DNR — Lansing, MI
Student Software Developer — *May 2023 – Jun 2024*

- Built an Angular/.NET production app serving 500+ monthly users; automated legacy data migration with SSIS packages and SQL, and set up CI/CD to replace manual builds.

Projects

Dispatch · *Tauri, Rust, TypeScript, Bun* — dispatch.foo · 2026 – Present

- Local-first mission control for coding agents. Tasks are markdown files in the repo, synced through git; each agent runs in an isolated worktree limited to the paths its task declares, with budget caps and verify gates.

Loggit · *React Native, Expo, Fastify, PostgreSQL* — useloggit.app · 2026 – Present

- iOS app on the App Store with 80 users: one feed for films, TV, books, video games and board games. Wrote a cross-media recommender ("you liked this book, try this film") scored to each user's taste.

ngmi · *Go, PostgreSQL, Redis, HTMX* — ngmi.review

- Global leaderboards for GitHub PR review time across public repos, users and orgs; a breadth-first crawler keeps expanding coverage.

Query · *Tauri, Rust, React, TypeScript* — github.com/brass-raven/Query · 2025

- Desktop SQL client with sub-1s startup, Monaco editor with schema-aware autocomplete, OS keychain credentials and inline editing on 1M+ row results.

Education & Writing

Michigan State University · B.S. Computer Science, GPA 3.8
Writing · Posts on what I learn building software at wyatdoesathing.substack.com and wyat.me/blogs

Technical Skills

Languages: TypeScript, JavaScript, Python, Go, Rust, SQL (PostgreSQL, MySQL), C#, HTML/CSS
Frameworks: React, Next.js, React Native, NestJS, Fastify, Flask, FastAPI, Tauri, Angular, .NET Core
Data & Infra: PostgreSQL, Redis, RabbitMQ, GraphQL, REST, Docker, Kubernetes, AWS, Railway, GitHub Actions, Jest
