Wyat Soule

wyat.me · github.com/wsoule
linkedin.com/in/wyat-soule

Full-stack product engineer and two-time co-founder. I take products from 0 to 1, including tools coding agents drive directly (an MCP server, an A2A bridge, a JSON CLI), and own them end to end, from code to pricing.

Experience

Waggoner Financial — Lansing, MI
Software Engineer — *Jun 2024 – Present*

- Lead a team of 4 engineers (grew it from 1 by interviewing and hiring) shipping fintech products in a TypeScript monorepo I designed (NestJS, GraphQL, Next.js, PostgreSQL, Redis); bootstrapped 5+ greenfield products in it.
- Replaced legacy Excel workflows with REST/GraphQL APIs and ETL scripts, giving staff back 100+ hours a month.
- Halved page load times with query indexing, Redis caching and React code-splitting; keep 2,500+ Jest tests at 95% coverage, cutting production bugs by 70%.
- Set up Railway infra and GitHub Actions CI/CD with zero-downtime deploys; new environments take hours, not days.

Hydrogen
Co-founder & Co-CEO — *Jan 2025 – Aug 2026*

- Co-founded a SaaS platform for automated pull-request review and built its Go backend.
- Owned product, sales, fundraising and hiring the founding team.

Brass Raven — Reed City, MI
Co-founder — *Oct 2022 – Jan 2025*

- Built Audioparrot, an AI audiobook platform (Python microservices, Next.js, TTS from OpenAI, ElevenLabs, Google and Piper); made generation 5× faster by moving chapters onto RabbitMQ async workers with Redis caching.
- Pitched 20 prospects through direct sales and conferences, and landed a technology partnership.

State of Michigan – DNR — Lansing, MI
Student Software Developer — *May 2023 – Jun 2024*

- Built an Angular/.NET production app serving 500+ monthly users; automated legacy data migration with SSIS packages and SQL, and set up CI/CD to replace manual builds.

Projects

Dispatch · *TypeScript, Bun, Tauri, Rust* — dispatch.foo · github.com/wsoule/dispatch · 2026 – Present

- Local-first task board coding agents work from (Claude Code, Codex and 7 others). Each run gets an isolated git worktree scoped to its task's declared files, with budget caps, verify gates and human-approved scope changes.
- Built the surface agents use: an MCP server with 36 tools published to npm and the official MCP registry, a Claude Code plugin whose skills teach agents the workflow, an A2A 1.0 bridge, and --json output on every CLI read.
- A/B test harness changes (tool pruning, prompt-cache TTL) on cost per completed task before making them default; ship signed macOS and Linux releases and set the open-core pricing.

Loggit · *React Native, Expo, Fastify, PostgreSQL* — useloggit.app · 2026 – Present

- iOS app on the App Store with 80 users: one feed for films, TV, books, video games and board games. Wrote a cross-media recommender ("you liked this book, try this film") scored to each user's taste.

ngmi · *Go, PostgreSQL, Redis, HTMX* — ngmi.review

- Global leaderboards for GitHub PR review time across public repos, users and orgs, fed by a breadth-first crawler.

Also built · **WikAI Race**, LLMs from 7 providers racing each other through Wikipedia links (Next.js); **Query**, a Tauri/Rust SQL client with inline editing on 1M+ row results.

Education & Writing

Michigan State University · B.S. Computer Science, GPA 3.8
Writing · Posts on what I learn building software at wyatdoesathing.substack.com and wyat.me/blogs

Technical Skills

AI & agents: MCP server development, A2A, Claude Code and Codex harnesses, Anthropic, OpenAI and ElevenLabs APIs
Languages: TypeScript, JavaScript, Python, Go, Rust, SQL (PostgreSQL, MySQL), C#, HTML/CSS
Frameworks: React, Next.js, React Native, NestJS, Fastify, Flask, FastAPI, Tauri, Angular, .NET Core
Data & Infra: PostgreSQL, Redis, RabbitMQ, GraphQL, REST, Docker, Kubernetes, AWS, Railway, GitHub Actions, Jest
